

# How to download your Stream videos

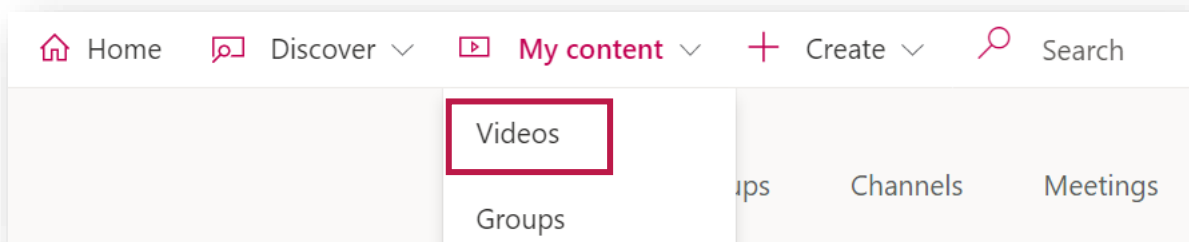

Follow the steps below to download your Microsoft Stream videos.

## Download your Microsoft Stream videos

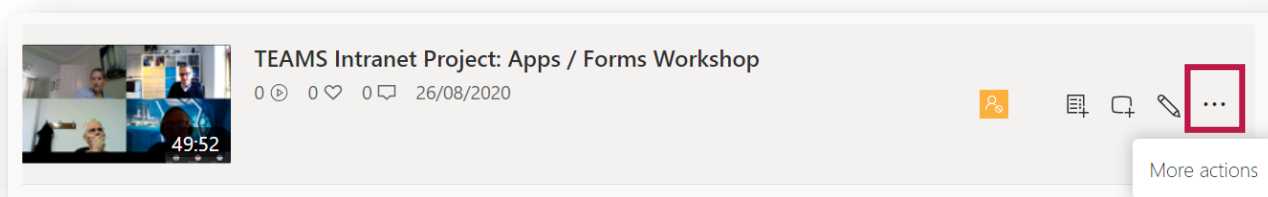

Save your videos to OneDrive or another location.

1. Go to Microsoft Stream by clicking the **Stream** button in the App Launcher.

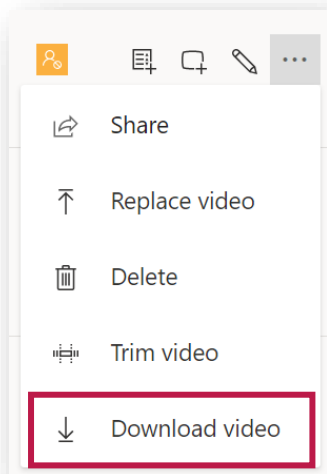

2. Click on **My content** and **Videos** to go to your collection of Stream videos.

3. Select the video you wish to download and click the **More actions (...)** button.

4. Click **Download video**.

5. **Save the file** to your OneDrive or local PC.

We recommend saving files to your OneDrive so videos are automatically transferred to your new Microsoft 365 account.

**Success!** A copy of your Stream video will now be available offline in case you need it.

You can play the video from its saved location, or upload to Stream again once you have received your new Microsoft 365 account details.
